Overview

Zestard's "Add to Cart Popup for M2" extension can be used while adding product to the cart to get an option of continue shopping, redirect checkout or go to the cart with 5 seconds timer. This extension is used for user convenience while shopping.

Admin can enable and disable the popup from the configuration settings.

Features

- Store admin can enable and disable the popup as per requirement.
- 5 seconds timer for selecting the option to Go to Checkout Page, go to cart page and continue shopping.

Reasons to choose Zestard's Add to Cart Popup ?

- Improves customer's experience by decreasing number of page redirects.
- A good customer experience impacts brand loyalty and customer retention. It make the customer's purchase process easier and enhance the on-site experience.
- Gives an option to user to select between Continue Shopping, Redirect to Cart Page or Redirect to Checkout Page with 5 second timer.
- By default in Magento 2 store, the customer only gets a small notice that says "You added Product to your shopping cart." at the top or bottom of the page when he/she clicks on the add to cart button. Instead of that, our extension offer your customers an immediate visual verification without having to scroll up or down by

showing a popup when they add a product to the cart.

- An added benefit is that the popup enhances your store's design and layout.

Installation Guide

Once you have purchased & downloaded our extension follow below steps to Install the extension. The easiest way to install a Magento 2 extension is using SFTP or FTP. To do this, first download our Add to Cart Popup module and follow below steps.

In short, for Professionals or Techie Person

1. Unzip the extension.
2. Login to your root directory via FTP or SFTP.
3. Go to the below path in your remote directory `app/code/`
4. Create folder Zestardtech and under that create subdirectory CartPopup.
5. Now upload all the unzipped code into CartPopup folder.
6. Then open your SSH or Terminal.
7. Go to your root folder and RUN below 4 commands step by steps: ●
 - `php bin/magento setup:upgrade`
 - `php bin/magento setup:di:compile`
 - `php bin/magento setup:static-content:deploy -f`

- php bin/magento cache:clean

8. If you didn't get any error during the commands execution process then our extension is successfully installed in your store.

To Note: If you face any error during this process then please either share the screenshots or share credentials of your store at our email id support@zestard.com and will help you install the extension properly.

Instructions

Step 1: Take precautionary measures before starting to install the extension.

- Log in to the Magento Admin and disable all the caches:

Goto System → Tools → Cache Management.

Selecting all caches in the list and choose “Refresh” option from “take action” dropdown menu and finally press submit.

The screenshot shows the Magento Admin Cache Management interface. At the top, there are 'Refresh' and 'Submit' buttons. A red arrow points to the 'Submit' button with the text '14 records found (14 selected) Select Refresh & Submit'. Below this is a table with the following columns: Cache Type, Description, Tags, and Status. The table contains five rows, each with a checked checkbox in the first column and a green 'ENABLED' button in the last column.

<input type="checkbox"/>	Cache Type	Description	Tags	Status
<input checked="" type="checkbox"/>	Configuration	Various XML configurations that were collected across modules and merged	CONFIG	ENABLED
<input checked="" type="checkbox"/>	Layouts	Layout building instructions	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input checked="" type="checkbox"/>	Blocks HTML output	Page blocks HTML	BLOCK_HTML	ENABLED
<input checked="" type="checkbox"/>	Collections Data	Collection data files	COLLECTION_DATA	ENABLED
<input checked="" type="checkbox"/>	Reflection Data	API interfaces reflection data	REFLECTION	ENABLED

- Now log out of your admin panel, and log back in again.

Step 2: Connect to FTP and upload the extension folder to your root directory. • Connect to your site using FTP or SFTP and upload the extracted module files to your Magento root directory. This will not overwrite any existing files, just add new files to the existing folder structure.

Step 3: Run Commands

- Open your SSH or Terminal.
- Go to your root folder and RUN below 4 commands step by steps: ○
`php bin/magento`

```
[root@103 magento221]# php bin/magento setup:upgrade
Cache cleared successfully
File system cleanup:
/home/idroides/public_html/magento221/generated/code/Composer
/home/idroides/public_html/magento221/generated/code/Magento
/home/idroides/public_html/magento221/generated/code/Shopial
